2020												3.28%	3.28%

A somewhat uncertain start to the year, demonstrated by an airpocket on the last day of the month. Relative value worked best in equities, espacially our long Japan / short China exposure, on top of related gains from a short Yen currency position. In fixed income, a short posture was also useful at the far end, but not in the middle of the curve. Detracting positions were quite concentrated, primarily in volatile Technology stocks plus a short in natural gas that was impacted by a snap of cold weather.
