2021	0.08%	2.83%	1.27%	1.71%	-0.04%	0.28%	0.18%	0.46%	-1.66%	0.64%	-2.00%	0.03%	3.79%
2020												3.28%	3.28%

A tough month from beginning to end as data and events buffeted most markets. Our meaningful long position in gold was a substantial contributor, aided by our existing short position in natural gas. However these were rather lonely positives compared to the negatives from US large cap equities, high yield credit and the Euro. Currencies in general were difficult, as the dollar surged across the board. Our risk exposure has reduced accordingly and cash has increased as the model seeks out more certainty.
