2020												3.28%	3.28%

A flat month feels like something of a win, amidst notable volatility and rapid continual changes to our portfolio. We benefitted from good timing of our increased gold position, as it contributed outsized gains for the month. A short in small cap US equities was also well-timed. However these were offset by more widespread losses in equities generally, and in high yield credit specially; fixed income was difficult overall, as we were also whipsawed on both the long and short side of Treasuries.
