

January 2026

The EZ-A strategy deploys a unified, cross-asset quantitative model derived from established academic research. The strategy seeks to provide an attractive absolute return with no use of leverage and a relatively low targeted level of volatility.

2021	0.08%	2.83%	1.27%	1.71%	-0.04%	0.28%	0.18%	0.46%	-1.66%	0.64%	-2.00%	0.03%	3.79%
2020													3.28% 3.28%

A good start to the year, with positive performance across sectors - though much had a short dollar flavour. International equities led the way, powered by longs in Asia and Europe. Precious metals were also significant, as silver jumped higher. An increased long position in credit also contributed positively. Losses were relatively contained outside of a short yen position that suffered from a sharp break around mid-month.
